CDNA clone Timp3HCM-3 (T02361) codes for a natural variant (R84217) of tissue inhibitor metalloproteinase 3 (TIMP-3), lacki a portion of the N-terminus of the mature protein in comparison with the clone Timp3Clone 7 product (R84215). Timp3HCM-3 was isolated from a human colonic mucosa cDNA library using primers
                                                                                                                                                                                                                                                                                                                                                                                   29.FEB-1996 (first entry)
TIMP-3 clone Timp3HCM-3.
TIMP-3; tissue inhibitor metalloproteinase type three; cancer; inflammation; emphysema; embryo implant modulation; arthritis; dystrophic epidermolysis bullosa; peridontal disease; ulcer; scleroderma; vulnerary; gene therapy; ss.
                                                                                                                                                                                                                                               WO9509918-A1.

CDNA clone Timp3clone2 (T02360) codes for a natural variant (R84216) of tissue inhibitor metalloproteinase 3 (TIMP-3), lacking part of the signal peptide of the Timp3clone 7 product (R84215). The cDNA clone was isolated from a human 20 and 24 wk foetal kidney cDNA library using primers based on TIMP sequences. The cDNA is pref. expressed in Escherichia coli for use in recombinant TIMP-3
                                                                                                                                                                                                                                                                                                                                                                                                                TIMP-3; tissue inhibitor metalloproteinase type three; cancer; inflammation; emphysema; embryo implant modulation; arthritis; dystrophic epidermolysis bullosa; peridontal disease; ulcer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                based on TIMP sequences. The cDNA is pref. expressed in Escherichia coli for use in recombinant TIMP-3 prodn. Genes coding for TIMP may also be useful for gene therapy e.g. of emphysema.
